

TTS Rankings Revised

08.07.2020

- uses troposphere average lifetime
 - only use 0-25 N
- TOGA and AWAS fill values are replaced with $1/2$ LOD
- Each RF average UT is matched to the campaign average BL (e.g. ratio computed using mean of RF07 UT/ mean of campaign average BL)

| TROPOSPHERE LIFETIME | | | | | |
|----------------------|------|------|------|-------------------|-------------------|
| Not Sorted | | | | | |
| Flight | Mode | Mean | R^2 | # UT Samples TOGA | # UT Samples AWAS |
| RF05 | 2.6 | 9.8 | 0.72 | 96 | 16 |
| RF06 | 1.1 | 3.9 | 0.69 | 39 | 11 |
| RF07 | 1.3 | 4.9 | 0.80 | 44 | 13 |
| RF08 | 3.6 | 13.1 | 0.87 | 48 | 12 |
| RF09 | 2.8 | 10.3 | 0.89 | 48 | 9 |
| RF10 | 3.1 | 11.9 | 0.88 | 75 | 13 |
| RF11 | 3.8 | 14.2 | 0.90 | 54 | 12 |
| RF12 | 4.6 | 17.7 | 0.87 | 86 | 27 |
| RF13 | 3.8 | 14.0 | 0.92 | 128 | 40 |
| RF14 | 5.6 | 21.3 | 0.92 | 47 | 9 |
| RF15 | 5.3 | 19.8 | 0.92 | 11 | 5 |

From TOGA/AWAS merge files. So 1 sample for TOGA entire 2 minute sampling period.

RF15 seems to be missing some data?

TOGA sampling can be less if there are a lot of missing data for that particular tracer – e.g. very short lived species like acetaldehyde for RF13. TOGA took 128 samples in the UT between 0 – 25N but only 56 of those had detected Acetaldehyde.
